## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Coran (2003/003187) in view of Brun (5653934).

Coran teaches the claimed apparatus having a two mold halves (45), extraction arm 2, revolving turret (3) with cool down cups (6), as seen in Figures 1 and 9-19, the turret revolves about a horizontal axis and the objects permit the preforms to be collected and cooled and then dropped down below, see Figure 18. The preforms are collected by collection means [0080].

Coran fails to teach an extraction table below the turret.

Brun teaches an extraction device with slots and teeths (See Figures 11, 13, and 14) for gripping the preforms from the molding apparatus. The extraction device of Brun functions the same as the claimed extraction table and is also positioned similarly below a movable platen (24), in this case it would be similar to a rotary turret.

It would have been obvious for one of ordinary skill in the art to modify Coran with an extraction table as taught by Brun as an improved article removing device for collection means below the turret. The apparatus of Coran modified by Brun would function as the claimed process.

### ***Conclusion***
